Subject: Detrex High Risk Drug Components Statement

To whom it may concern,

Detrex Chemicals hydrochloric acid products are made using a direct synthesis process using only high purity hydrogen, chlorine and DI water. The hydrochloric acid product from our process is chemically pure with very few trace contaminants or elemental impurities.

Detrex Chemicals does not add or use glycerin, propylene glycol, maltitol solution, hydrogenated starch hydrolysate, sorbitol solution, or any other high-risk drug components in the manufacture of hydrochloric acid.

While we do not routinely test for these compounds, to the best of our knowledge we have no reason to suspect they may exist in our hydrochloric acid products.

Sincerely,

A handwritten signature in black ink that reads "Dave Morgan". The signature is fluid and cursive, with the first name "Dave" being more prominent than the last name "Morgan".

Dave Morgan
Global Product Manager, Hydrochloric Acid
